

EDITORIAL

A new Section

This issue of the Journal S&A opens a new Section, dedicated to the software: the Statistical Software section. A first paper presents a new version of R software of CUB models, proposed by M. Iannario e D. Piccolo; a second paper presents instead the R software of Nonlinear CUB models, proposed by M. Manisera e P. Zuccolotto.

An old Section

This issue proposes again the Teacher's Corner section, appeared for the first time in 2007, on the 2nd issue of the Volume V, with the work: "Using the properties of the arithmetic mean for least square interpolation" of W. Maffenini and M. Poliscchio. The paper here published is "Viewing Simpson's Paradox" of P. Wijayatunga.
